

# Remotely Operated Vehicles

This register provides an essential reference tool if you are involved or interested in the world of ROVs

In the seventeen years since it was first published it's grown with the industry it serves to become the standard reference work on the world's ROV fleet, the companies responsible for the vehicle operations and the suppliers of specialised equipment, products and technology that make ROVs so cost effective for so many of today's subsea operators.

As you would expect you will find detailed specifications and performance information for vehicle designs currently in production worldwide (there are some 460 in total), but there is much more. In this new ninth edition you will find separate chapters listing builders, operating companies, equipment manufacturers and vessels equipped to support ROV operations.

Each chapter has its own index for straight forward data access and each entry features full contact information making the book also the best ever ROV industry directory.

We have included an eight page full colour montage of typical vehicles contained within this register.

If you want the ROV business at your fingertips - look no further.

This data can also be supplied as a database or online subscription. See the order form overleaf for price details.
